

We set the new Standard!

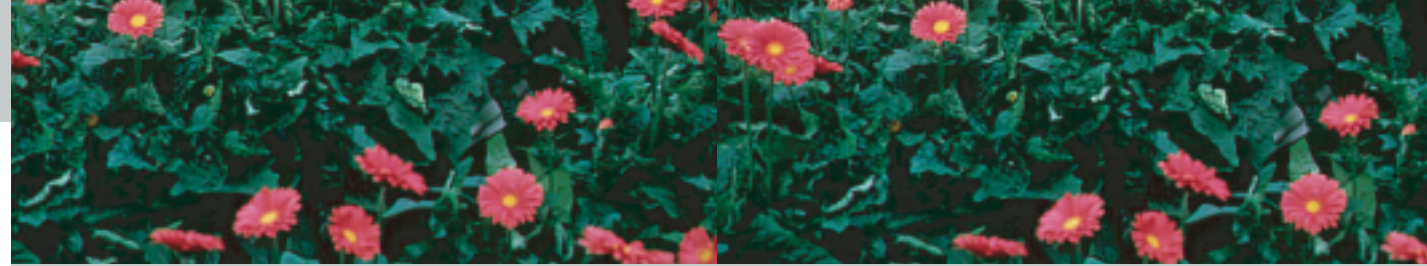

How can you recycle Grodan ?

To avoid disease transfer, do like the farmers: **CROP ROTATION**

Example:

- Grow a vegetable plant
- Chop up the used slab/block into little 1/4" growcubes and remove loose root mass.
- Grow flowers in the chopped cubes
- When you are tired of the flower, remove the plant and the loose root mass.
- Pot up a foliage - or house plant in the used cubes.

Use Grodan stone wool for all sorts of garden plants: tomatoes, cucumbers, peppers, herbs, flowers, etc. Also house plants grow very well in our growcubes.

We set the new Standard!

Grodan stone wool is known throughout the world as the high performance growing media.

Now we are kicking it up a notch!

We are now introducing a new generation of Grodan growing blocks and cubes.

grodan[®]
Delta

The word Delta signifies change. We have changed the blocks to better meet your demands. The uniformity of the blocks has been improved and **Delta** features modified grooves in the bottom of the block.

Delta

grodan[®]
Delta

- Robust block without being too rigid.
- Modified grooves to improve drainage and avoid “wet feet”.
- New pore sizes for optimal air to water relationship.
- To help prevent root problems the night time target water content is 50% wet. The Delta block makes this target much easier to achieve.
- Even higher uniformity that makes life as a hobbyist easier.

Help us maintain our green image -
RECYCLE YOUR GRODAN!

We already produce a huge amount of Grodan from recycled Grodan. As a hobbyist you can recycle too.
